¹Total return on investment is the actual change in the value of the securities in the portfolio. It includes the reinvestment of dividends and capital gain distributions as well as changes in the net asset value (price per share). The average annual total returns are for historical periods and include changes in share price and reinvestment of dividends and capital gains, if any. Average annual total returns for more than one year assume a steady compounded rate of return and are not the fund's year-by-year results, which varied over the periods shown.

²The Stable Return Fund produced an annualized return of 3.74% for the quarter ending September 30, 2009.

³This is not an available fund, but rather a benchmark for comparison of fund performance.
